

Inspiring Excellence

Course Code:	CSE111
Course Title:	Programming Language II
Classwork No:	08
Topic:	OOP (inheritance)
Number of tasks:	4

Task 1

A multinational company has two special types of regular employees. One is Foreign employees and another one is Part time employees. Design the Employee (parent), Foreign_employee(child) and Parttime_employee(child) classes so that the following output is produced. The Foreign_employee and Parttime_employee classes should inherit the Employee class. Note that:

- Basic salary of a Regular, Foreign employee is 30,000 and for Part-time employees basic is 15,000.
- Regular employees get 10% increment on their salary and Foreign employees get 15% increment on their basic salary.
- Employees from the HR department will collect their work distribution load from the manager, and others will collect their work distribution load from the HR department.

Driver Code	Output
<pre> print("1-----") emp1=Employee("Nawaz Ali", 102, "Marketing") print("2-----") emp1.employeeDetails() print("3-----") emp1.workDistribution("Marketing") print("4-----") emp1.increment() emp1.employeeDetails() print("5-----") f_emp=Foreign_employee("Nadvi", 311, "Human Resource") f_emp.employeeDetails() print("6-----") f_emp.workDistribution("Human Resource") print("7-----") f_emp.increment() f_emp.employeeDetails() print("8-----") p1_emp=Part_time_employee("Asif", 210, "Sales") p2_emp=Part_time_employee("Olive", 223, "Accounts") print("9-----") p1_emp.employeeDetails() print("10-----") p1_emp.workDistribution("Sales") print("11-----") p2_emp.increment() print("12-----") </pre>	<pre> 1----- 2----- Name: Nawaz Ali, Dept Marketing Employee id: 102, Salary: 30000 3----- Collect work distribution loads from the HR department. 4----- Name: Nawaz Ali, Dept Marketing Employee id: 102, Salary: 33000.0 5----- Name: Nadvi, Dept Human Resource Employee id: 311, Salary: 30000 Employee Type: Foreign 6----- Collect work distribution details from the manager. 7----- Name: Nadvi, Dept Human Resource Employee id: 311, Salary: 34500.0 Employee Type: Foreign 8----- 9----- Name: Asif, Dept Sales Employee id: 210, Salary: 15000 Employee Type: Part Time 10----- Collect work distribution loads from the HR department. 11----- 12----- Sadly, there is no increment for the part time employees!! </pre>

p2_emp.employeeDetails()

12-----
Name: Olive, Dept Accounts
Employee id: 223, Salary: 15000
Employee Type: Part Time

Task 2

You are given the parent class Point:

```
class Point:
    def __init__(self, x=0, y=0):
        self.x = x
        self.y = y
        self.area = 0

    def calculate_area(self):
        return self.area

    def print_details(self):
        print("----- Printing details -----")
        print(f'Co-ordinate: ({self.x},{self.y})')
        print(f'Area: {self.area}')
```

Some information about calculating the area of circle and sphere:

Area of a circle: πr^2

Area of a sphere: $4\pi r^2$

Here, Inheritance tree will be Point=>Circle=>Sphere

Write **Circle** and **Sphere** classes to generate the following output.

Driver Code	Output
<pre>print("-----1-----") p1 = Point(2,3) print(f'Area of p1: {p1.calculate_area()}') print("-----2-----") p1.print_details() print("-----3-----") p2 = Point() p2.print_details() print("-----4-----") c1 = Circle(4,0,3) print(f'Area of c1: {c1.calculate_area()}') print("-----5-----") c1.print_details() print("-----6-----") c2 = Circle(7) print(f'Area of c2: {c2.calculate_area()}') print("-----7-----") sph1 = Sphere(3,0,2) print(f'Area of sph1: {sph1.calculate_area()}') print("-----8-----") sph1.print_details() print("-----9-----") sph2 = Sphere(6) print(f'Area of sph2: {sph2.calculate_area()}')</pre>	<pre>-----1----- Area of p1: 0 -----2----- ----- Printing details ----- Co-ordinate: (2,3) Area: 0 -----3----- ----- Printing details ----- Co-ordinate: (0,0) Area: 0 -----4----- Area of c1: 50.2656 -----5----- ----- Printing details ----- Co-ordinate: (0,3) Area: 50.2656 Radius: 4 -----6----- Area of c2: 153.9384 -----7----- Area of sph1: 113.0976 -----8----- ----- Printing details ----- Co-ordinate: (0,2) Area: 113.0976 Radius: 3 -----9----- Area of sph2: 452.3904</pre>

Task 3

A bank has two types of accounts : Savings account and Fixed-deposit account. Some features of these accounts are:

- Savings account:
 - An interest rate can be applied
 - You can deposit money anytime you want.
 - Withdrawal can be made unless its crosses the lower limit of the account
- Fixed deposits account:
 - You can not deposit money anytime you want.
 - Withdrawal can be made after the account is matured.

The parent class Account is given below:

```
class Account:
```

```
    def __init__(self, account_number, balance):
        self.account_number = account_number
        self.balance = balance
        self.account_type = "General"
        self.maturity = 0
```

```
    def print_details(self):
        print("----- Account details -----")
        print(f"Account Type: {self.account_type}, Maturity: {self.maturity} years")
        print(f"Account Number: {self.account_number}, Balance: ${self.balance:.2f}")
```

```
    def deposit(self, amount):
        self.balance += amount
        print(f"Deposited ${amount:.2f}. New Balance: ${self.balance:.2f}")
```

```
    def withdraw(self, amount):
        if self.balance >= amount:
            self.balance -= amount
            print(f"Withdrew ${amount:.2f}. New Balance: ${self.balance:.2f}")
        else:
            print("Insufficient funds.")
```

```
    def year_passed(self, year):
        self.maturity += year
        print(f"Maturity of the account: {self.maturity} years")
```

Write the classes **SavingsAccount** and **FixedDepositAccount** derived from the **Account** class to generate the following output.

Driver Code	Output
<pre> print("-----1-----") account = Account("A203", 2000) account.print_details() print("-----2-----") account.deposit(400) account.withdraw(1500) account.year_passed(2) print("-----3-----") account.print_details() print("-----4-----") savings_account = SavingsAccount("Savings","SA123", 1000, 0.05, 500) savings_account.print_details() print("-----5-----") savings_account.deposit(400) print("-----6-----") savings_account.withdraw(1000) print("-----7-----") savings_account.withdraw(800) print("-----8-----") savings_account.apply_interest() print("-----9-----") savings_account.print_details() print("-----10-----") fixed_account1= FixedDepositAccount("Fixed Deposit","FDA321", 10000, 5) fixed_account1.print_details() print("-----11-----") fixed_account1.deposit(400) print("-----12-----") fixed_account1.year_passed(6) </pre>	<pre> -----1----- ----- Account details ----- Account Type: General, Maturity: 0 years Account Number: A203, Balance: \$2000.00 -----2----- Deposited \$400.00. New Balance: \$2400.00 Withdrew \$1500.00. New Balance: \$900.00 Maturity of the account: 2 years -----3----- ----- Account details ----- Account Type: General, Maturity: 2 years Account Number: A203, Balance: \$900.00 -----4----- ----- Account details ----- Account Type: Savings, Maturity: 0 years Account Number: SA123, Balance: \$1000.00 Interest Rate: 0.05, Minimum Limit: \$500 -----5----- Deposited \$400.00. New Balance: \$1400.00 -----6----- Insufficient funds. -----7----- Withdrew \$800.00. New Balance: \$600.00 -----8----- Interest applied. New Balance: \$630.00 -----9----- ----- Account details ----- Account Type: Savings, Maturity: 0 years Account Number: SA123, Balance: \$630.00 Interest Rate: 0.05, Minimum Limit: \$500 -----10----- ----- Account details ----- Account Type: Fixed Deposit, Maturity: 0 years Account Number: FDA321, Balance: \$10000.00 -----11----- You can not deposit in a fixed deposit account. -----12----- Maturity of the account: 6 years -----13----- Withdrew \$10000.00. New Balance: \$0.00 -----14----- ----- Account details ----- </pre>

```

print("-----13-----")
fixed_account1.withdraw(10000)
print("-----14-----")
fixed_account1.print_details()
print("-----15-----")
fixed_account2 = FixedDepositAccount("Fixed
Deposit","FDA300", 50000, 7)
fixed_account2.print_details()
print("-----16-----")
fixed_account2.withdraw(10000)

```

```

Account Type: Fixed Deposit, Maturity: 6 years
Account Number: FDA321, Balance: $0.00
-----15-----
----- Account details -----
Account Type: Fixed Deposit, Maturity: 0 years
Account Number: FDA300, Balance: $50000.00
-----16-----
Can not withdraw, Account is not matured

```

Task 4

1	<code>class A:</code>
2	<code>temp = 4</code>
3	<code>def __init__(self):</code>
4	<code>self.sum = 0</code>
5	<code>self.y = 0</code>
6	<code>self.y = A.temp - 2</code>
7	<code>self.sum = A.temp + 1</code>
8	<code>A.temp -= 2</code>
9	<code>def methodA(self, m, n):</code>
10	<code>x = 0</code>
11	<code>self.y = self.y + m + (A.temp)</code>
12	<code>A.temp += 1</code>
13	<code>x = x + 1 + n</code>
14	<code>self.sum = self.sum + x + self.y</code>

15	<code>print(x, self.y, self.sum)</code>
16	
17	<code>class B(A):</code>
18	<code> x = 0</code>
19	<code> def __init__(self,b=None):</code>
20	<code> super().__init__()</code>
21	<code> self.sum = 0</code>
22	<code> if b==None:</code>
23	<code> self.y = A.temp + 3</code>
24	<code> self.sum = 3 + A.temp + 2</code>
25	<code> A.temp -= 2</code>
26	<code> else:</code>
27	<code> self.sum = b.sum</code>
28	<code> B.x = b.x</code>
29	<code> b.methodB(2, 3)</code>
30	<code> def methodB(self, m, n):</code>
31	<code> y = 0</code>
32	<code> y = y + self.y</code>
33	<code> B.x = self.y + 2 + A.temp</code>
34	<code> self.methodA(B.x, y)</code>
35	<code> self.sum = B.x + y + self.sum</code>
36	<code> print(B.x, y, self.sum)</code>

Write the output of the following code:

<pre> a1 = A() b1 = B() b2 = B(b1) b1.methodA(1, 2) b2.methodB(3, 2) </pre>	Output:		
	x	y	sum
